

"W" FLOOR[™] CONVEYOR SYSTEM

THE DECKING OPTION MADE FOR WASTE

Hallco's newest product, the "W" Floor[™], has been designed specifically for the refuse industry's requirements for a leak proof floor. By making the subdeck an integrated part of the floor system and placing the heavy-duty aluminum slats on top of it, Hallco has created a leak proof floor that spans the length and width of the trailer. The "W" Floor makes it possible to fully contain liquids, a common feature of refuse hauling. With decades of experience and engineering expertise, you can trust that the new "W" Floor is built to last. Designed with full length bearings to ensure smooth, consistent operation and a full 1/2" thick aluminum slat to handle the toughest loads.

Haul a larger load with the "W" Floor than you could in a trailer equipped with a bulky pushout or tipper. The compact yet powerful drive unit is front-mounted and connects to the floor slats under a hinged slope sheet for easy access. If the floor ever needs repairs, it is fully field-servicable with common parts – the individual slats can be removed with four bolts.

HALLCO LIVE FLOOR[®] 8000 DRIVE UNIT

The "W" Floor[™] is designed to match our 8000 Series drive, known as the "BRUTE", a front-mount hydraulic module. The BRUTE[™] is well suited to drive the "W" Floor deck and easily handles loads varying from simple commodities to severe loads such as demolition debris and municipal waste.

The BRUTE'S front-mount design allows it to be matched to leak proof deck systems. Trailers can accommodate the BRUTE with few modifications to the front king pin area.

With a proven success record in the waste industry, the BRUTE is noted for being reliable, tough, and long lasting. It is also customer friendly with its simple, straight forward design.

FRONT MOUNT ADVANTAGES:

- Keeps hydraulic module up and away from road salts and grime
- Shifts the weight of the floor driving mechanisms to the tractor allowing more payload
- No parts or hoses under the trailer
- Lower installation time
- Easy front access for repair, quick removal or replacement
